

Dear Hiring Manager,

I am writing to express my interest in the Software Developer position at your organization. With 1 year of hands-on experience as a Junior Software Developer at Yeshika Technologies, I have developed a strong foundation in building scalable web applications and interactive learning platforms.

During my current role, I have worked extensively with HTML, CSS, JavaScript, ReactJS, and Python (Django), along with backend technologies like Java and Spring Boot. I have contributed to the development of a Learning Management System (LMS), where I implemented features such as user authentication, course management, assessments, and performance tracking. This experience has strengthened my ability to build user-focused and efficient applications.

I have also independently developed several innovative projects, including a web-based PowerPoint editor with advanced features like drag-and-drop editing, real-time preview, and export functionality. Additionally, I created interactive educational games and an AI-powered presentation generator, showcasing my ability to combine creativity with technical skills.

I am particularly interested in opportunities that allow me to grow in areas such as full-stack development, automation, and modern web technologies. I am a quick learner, a strong problem solver, and a collaborative team player who is eager to contribute effectively to your team.

I would welcome the opportunity to discuss how my skills and experience align with your requirements. Thank you for considering my application.

Sincerely,
Lakshitha M R
